Data Sheet

HD-PAC1212-FLEX

Features:

- Square shaped thin profile with flexible printed circuit (FPC)
- Fast response times
- Strong haptic feedback

Design:

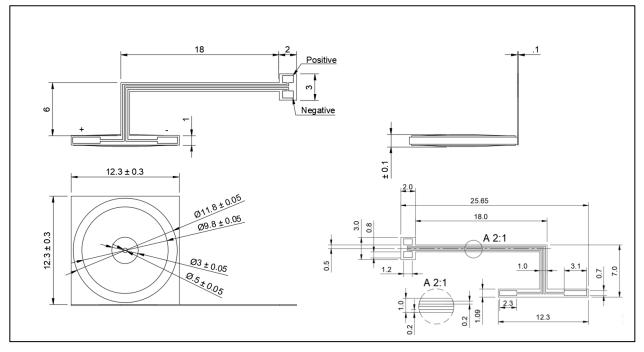

- Actuator dimensions: 12 x 12 x 1.44 mm (LxWxH)
- Emphasized displacement using titanium cymbals
- RoHS/REACH exempt PZT ceramics

Specifications

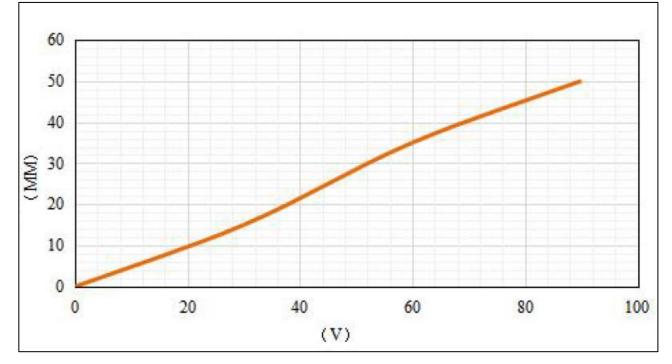

Parameters	Values	Units
Maximum Input Voltage	90	VPeak (15ms Max)
Working Voltage Range	0 ~ 90	$V_{Peak} \sim V_{Peak}$
Resonant Frequency	24 ± 5	kHz
Resonant Impedance	≤ 4 0	Ω
Capacitance	1000 ± 20%	nF (@1V, 1kHz)
Weight	1.04	Grams
Storage Temperature	-40 to +70	°C
Operating Temperature	-25 to +60	°C
Operating Humidity	< 75%	Relative Humidity
Free Vibration Displacement Bottom Fixation, 0~90Vp Measured at top of metal casing	50 ± 15%	µm (Peak-Peak)
Acceleration	12	g (Peak)
100g load, monopulse sine wave, 200Hz	21	g (Peak-Peak)
Environmental Compliances	RoHS/REACH	Exempt 7c-1

Dimensions (Units: mm)

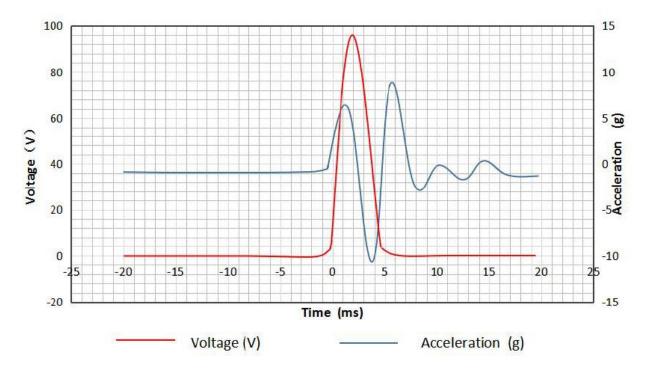

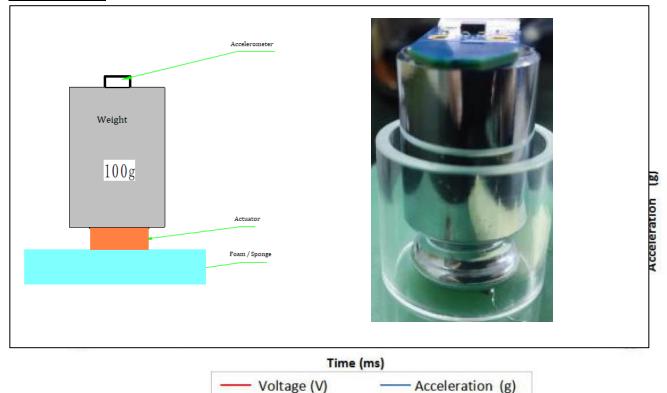

Acceleration Curves (Reference Only)

Acceleration curve of 100g load input, 0~90V voltage. Pulse length 5ms is equivalent to 200Hz.

<u>Test Fixture</u>

Accelerometer Type: DRV-ACC16-EVM (57mVp=1G)

Precautions

Operation:

- 1) Piezoelectric components may generate an impulse voltage when subjected to mechanical or thermal shock.
- 2) During the installation of piezoelectric components, the use of sulfur or sulfide should be avoided as much as possible, which may cause product failure due to corrosion of the surface of the ceramic.
- 3) During the use of piezoelectric components, it is necessary to avoid loading a DC bias voltage exceeding 0.3v (the loading direction should be consistent with the polarization direction, and the time should not exceed 168h) to avoid failure.
- 4) It is recommended to close the piezoelectric components through CRC to protect the sensor during use.
- 5) Piezoelectric components are not moisture absorbing components, and the humidity sensitivity level is Level 1.
- 6) Pb in piezoelectric ceramics is exempt from RoHS within clause 7 (c) 1.
- 7) Piezoelectric components cannot be repaired during post processing.

Storage:

- 1) Piezoelectric components should be avoided from being used or stored in corrosive gases such as chlorine, sulfur, acid, and alkaline gases. When storing at room temperature and normal humidity, try to avoid direct sunlight and sudden changes in temperature and humidity, which may cause sensor failure.
- 2) The storage of piezoelectric components should be avoided as much as possible under conditions of severe dust and high humidity.
- 3) The recommended storage temperature for the piezoelectric components is 25±5°C, humidity is 25-65%RH.
- 4) It is recommended to use the piezoelectric components within 7 days after opening the package. If they are not used up, it is necessary to replace the desiccant in the packaging tray and vacuumize the packaging.

Transportation:

- 1) During transportation, piezoelectric components should be protected from sunlight and damp environments.
- 2) Avoid strong impact and vibration on the product during transportation.

Packaging

1. 94pieces /Tray

Specifications Revisions
