Recommended Soldering Procedure

Important Notes

In order to minimize device damage:

1. Do not wash or clean PCBAs after the reflow process.

2. Do not apply over 0.3Mpa of air pressure into the microphone sound hole.

3. Do not expose microphone to ultrasonic processing or cleaning.

4. Do not place a vacuum over the microphone sound hole.

Reliability Testing

| Type of Test | Test Specifications |
|--------------------------------------|---|
| Simulated Reflow (Without Solder) | Samples for qualification testing require 3 passes 260±5 °C reflow solder profiles. 2 hours of setting time is required between each reflow profile test. |
| Static Humidity | Precondition at +25°C for 1 hour. Expose to +85°C with 85% relative humidity for 1000 hours. Finally, dry at room ambient for 3±1 hour before taking final measurement. |
| Temperature Shock | Each cycle shall consist of 30 minutes at -40°C, 30 minutes at +125°C with 5 minutes transition time. Test duration is for 30 cycles, starting from cold to hot temperature. |
| ESD Sensitivity | Perform ESD sensitivity threshold measurements for each contact according to MIL-STD-883G, Method 3015.7 for Human Body Model. Identify the ESD threshold levels indicating passage of 8000V Human Body Model. |
| Vibration Test | Vibrate randomly along three perpendicular directions for 30 minutes in each direction, 4 cycles from 20~2000 Hz with a peak acceleration of 20 Gs. |
| Shock Test | Subject samples to half-sine shock pulses (3000±15% Gs for 0.3ms) in each direction, for a total of 18 shocks. |
| Drop Test | Drop samples from 1.5m height onto a steel surface, total 18 times and inspected for mechanical damage. |
| Operation Life | Subject samples to +125°C for 168 hours under full maximum rated voltage. |
| | Place 15 microphones in water at 1m depth for 30 minutes. Remove and dissect 5 pieces to check for water ingress. Test remaining 10 microphones for sensitivity after resting at room |
| Waterproof Test | temperature for 2 hours. |

Microphone frequency response and sensitivity shall not deviate more than ±3 dB.
